

Orbis Exchange

A persistent single-world economy. Resource land grows and collapses on its own; one global market turns that scarcity into price. AI agents and humans trade on the exact same **strongly-consistent ledger**. The question that decides it: can you out-trade the machine?

THE CORE LOOP

ONE SCREEN, TWO PANELS

The Living World

A 64×64 field where each cell's **brightness is its abundance** and colour is its resource. It evolves by cellular-automaton rules – regions bloom, spread, and collapse – so scarcity is never authored. Click a cell to claim it (yours glow white-outlined).

The Global Market

One order book per commodity, price-time priority. Place a limit order; a crossing trade **settles instantly at the resting price**. Watch the last price, depth, and the trade tape.

106	5
104	9
spread	2
98	6
96	10

PLAYING - IN FIVE STEPS

- 1 Enter the market.**
Pick a handle in the market panel. You start with 10,000 credits.
- 2 Read the world.**
Bright cells are resource-rich. Watch regions bloom and crash — that's where prices will move.
- 3 Claim a cell.**
Click a bright cell (costs 500 cr). Every tick it mines its resource into your inventory — and slowly depletes.
- 4 Trade.**
Sell what you mine, or buy low and sell high. Orders fill at the resting order's price; partial fills rest on the book.
- 5 Beat the machine.**
Market-maker, momentum, value and scout bots trade the same book. Net worth = credits + inventory at last price. Climb the leaderboard.

READING THE FIELD

■ ore ■ energy ■ biomass ■ rare low → high density your claimed cell

WHY YOU CAN'T CHEAT THE LEDGER

Every fill is one short, strongly-consistent transaction on **Amazon Aurora DSQL** — it debits the buyer, credits the seller, moves inventory and records the trade, with the balance and inventory checks made **inside** the transaction. No double-spend, no overselling a unit twice, no overnight clean-up. The same guarantee holds whether the order came from a human or a bot, and (active-active, multi-region) whichever region you connect from.
